CATALOGUE

— OF —

WATCH MATERIAL.

Waltham Watch Company,
Waltham, Mass.

APRIL, 1911.

To Material Dealers and Watch Repairers:

PLAN OF CATALOGUE.

The catalogue is divided into two sections, A and B.

Material subjects general in character, and certain parts that can best be shown by themselves, are in Section A (blue paper). The pages in Section A are numbered with Roman numerals.

Section B (white paper) includes our complete line of watch material. In this section, the material is grouped by sizes and models, experience having shown this method, which originated at Waltham, to be the most convenient and comprehensive way of catalogueing watch material.

The illustrations in both Section A and B are, unless otherwise indicated, actual size.

Our material is divided into five grades, distinguished by the already familiar Waltham trade names, as follows:—

STERLING, BOND ST. OR SEASIDE.	ROYAL OR P. S. B.	RIVERSIDE OR A. T. & CO.	VANGUARD OR CRESCENT ST.	MAXIMUS OR AMERICAN WATCH CO.
---	-------------------------	--------------------------------	--------------------------------	-------------------------------------

QUALITY.

The quality of  watch material is beyond question the best that is made in this country or abroad. The superiority of our material over the imported article is well illustrated in the demand for our mainsprings, and the fact that annually, over three million  springs are sold in competition with imported mainsprings to repairers of watches. All material used in the construction of Waltham watches, and sold through our Material Department, is of this same high grade. This is one reason why Waltham watches are the best watches.

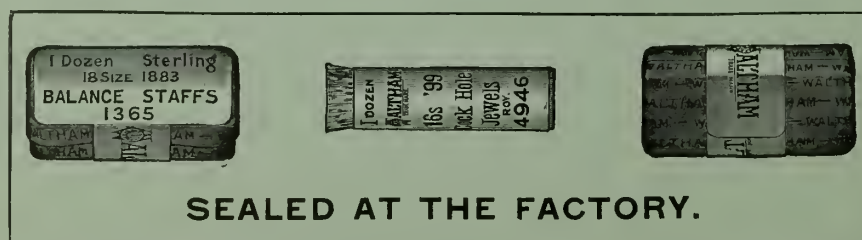

GENUINE MATERIAL.

It is sometimes a problem with the conscientious watch repairer to get genuine material. The difficulty may be overcome by following these suggestions:—

 Purchase  Assortments covering the line of staple  material, such as Clicks, Hands, Jewels, Screws, Small Springs, Staffs, etc.

The material in  Assortments is selected to meet the needs of the watch repairer, and it is labeled in such a manner as to assist him in every way possible. Note pages III. to XIII.

 Insist on getting “**Sealed-at-the-Factory**” goods.  material is put out from the factory in sealed vials or small tin boxes, containing one-half dozen or one dozen quantities.

SEALED AT THE FACTORY.

 Buy  watch material from material jobbers who will send it to you in a package with a **guarantee over their signature** that the material they send is genuine. This practice is becoming more and more common among reliable material jobbers.

————MATERIAL TO BE FITTED.————

When a new plate, bridge or cock is wanted, the remaining parts of the movement should be sent to insure perfect fitting at the factory.

If plate jewels, cock and foot hole jewels, pinions, arbors, or staffs, are to be matched or fitted at the factory, the part or parts should be sent with the order.

If hairsprings or complete balances are to be fitted at the factory, it is necessary that the complete balance or the movement be sent with the order.

————HOW TO ORDER MATERIAL.————

Determine the size and model of the movement for which material is wanted by referring to the cuts of movements illustrated on pages I. and II., Section A.

Give catalogue number of each part wanted, and the grade of the movement, as Sterling, Riverside, etc.

Compare number of leaves in pinions and number of teeth in wheels of the material to be duplicated, with catalogue descriptions.

When in doubt as to the material needed, send with the order a sample of the part to be duplicated and the number of the movement for which it is required.

Order pendant setting case bars and sleeves by numbers, shown on pages XIV. and XV. If other case material is required it is important that the size of the square and diameter of the threads be given. When possible, submit samples to be duplicated.

If any retailer is unable for any reason, to obtain genuine  material from a jobber, we will consider it a favor to be informed of the fact, and will at once see that the material is supplied.

All prices in this catalogue are net and subject to 6 per cent. discount for cash. The prices do not include the *fitting* of material, for which there is an extra charge according to the work.

PERFECT JEWELS A NECESSITY.

Only absolutely perfect jewels should be used in a watch. If there is the slightest flaw, so slight that the microscope has to be used to detect it, the wear on the pivot will develop sooner or later to the very serious detriment to the watch. Good jewelers will appreciate this.

The Waltham Watch Company examine jewels that come into this country, and select for their watches and material only such as pass the most rigid microscopic tests. It is a known fact that jewels not perfect enough to be bought by the Waltham Watch Company and consequently rejected by them, are offered by unscrupulous material dealers to jewelers, at a lower price than that charged for genuine ~~WALTHAM~~ jewels. The difference in the price of perfect jewels over "bargain lots," is more than made up in the value of the jewels themselves, and in the better running of a watch movement in which they are placed.

METAL DIALS.

METAL DIALS, as heretofore made by Foreign Manufacturers, have not been in favor among Americans, because such dials were not legible, could not be cleaned without injuring the dial, and were too expensive. All the above objections have been overcome by the Waltham Watch Company, who are now prepared to furnish Metal Dials in either Solid Gold, Gilded, or Silvered. These new dials are practically indestructible, artistic in appearance, distinctly legible and accurately graduated. They will be furnished either plain or with centers finely engine turned in a variety of artistic designs.

The WALTHAM Mainspring Gage

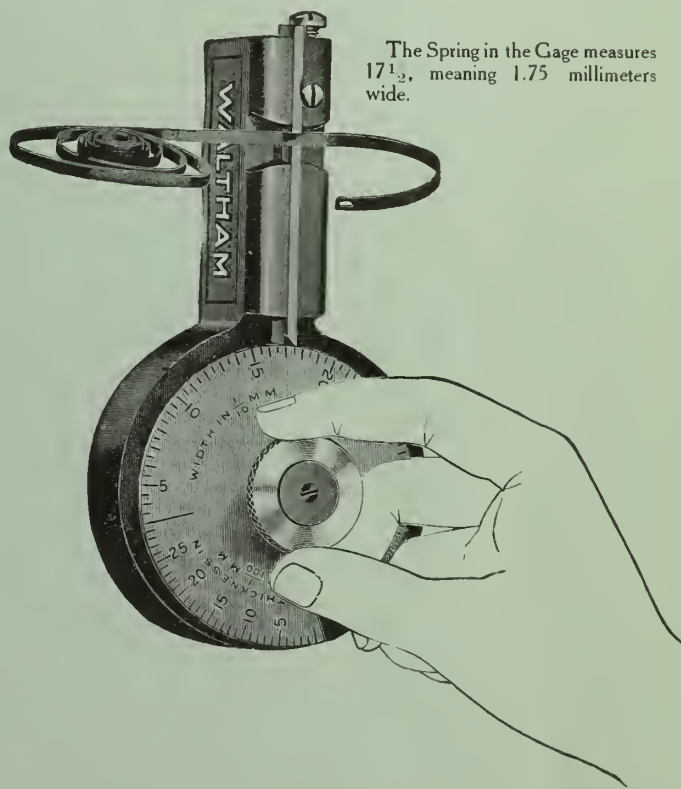

PATENTED JANUARY 1, 1907.

....A GAGE WITH NUMBERS THAT STAND FOR SOMETHING....

The Spring in the Gage measures 12, meaning .12 millimeters thick.

The Spring in the Gage measures $17\frac{1}{2}$, meaning 1.75 millimeters wide.

Method of using the  WALTHAM Gage (with friction thumb piece) to determine accurately the thickness or width of a spring.

This gage is marked with Metric graduations, easily read and understood by the watch repairer.

Since it is becoming the universal practice to mark and order Mainsprings by Metric numbers, it is quite necessary that every watchmaker and jeweler should have a reliable Metric gage for measuring his springs.

The  WALTHAM gage meets every requirement and is sold at a price within the means of all.

....PRICE \$1.00 EACH....

WALTHAM Watchmaker's Gage. TRADE MARK.

The cordial reception given the **WALTHAM** Mainspring Gage has led to supplementing it by one constructed on the same principal but of an improved pattern, more convenient for measuring staffs, pivots and other small parts. The dial is graduated to read in one hundredth millimeters.

WALTHAM Gages are adjusted with great care and will be found accurate and reliable. They are finished copper bronze or gray sand blast surface, and can be procured through watch material jobbers.

Price, \$2.00 Net.

A watchmaker's gage with two dials is also supplied, one dial as shown in the above illustration and intended for fine gaging, and an additional dial, graduated for measuring mainsprings. The dials will interchange, requiring but slight adjustment when the change is made. Price for gage with two dials, \$2.50 net.

SCREWS AND SCREW TAPS.

Balance, Banking, Meantime, Regulator, Setting Lever, and Winding Screws are described under each size and model in Section B of this catalogue. On the two following pages are tables of  screws, (including the above kinds) and the required tap for each screw.

Taps are designated by factory numbers, and it will be noted that but twelve are needed for the entire schedule of screws.

 Watch Screws are also supplied **extra size**, so-called, for screw holes slightly worn and consequently a bit larger in diameter than when originally made. For such Screws specify when ordering, "**extra size**."

To illustrate:— If 16s '99 Model Jewel Screws or Taps, **standard** size, are wanted, order Screws No. 45 or Taps No. 17. If **extra** size is wanted, (for large hole), order Screws No. 45 **extra**.

 Watchmaker's Gages, shown on page XXIV. will be found very accurate and convenient in determining the diameter of screws.

THE DIAMETER OF SCREWS IS GIVEN IN MILLIMETERS.

HAIR SPRINGS.

Each  Breguet Hair Spring is in a separate envelope, plainly marked with the Catalogue number and strength. The higher the number the stronger the spring.

 Breguet Hair Springs in Vanguard and Maximus grades have the famous Phillips' curve, are fitted with Gilded Collets and cut for isochronal adjustment, in fact are the Maximus in every sense.

HAIR SPRING TABLE.

For Sterling-Royal Grade \$6.00 per Dozen. Regular List Price. Used with Balances with Composition Screws.						For Vanguard and Maximus Grades \$9.00 per Dozen. Regular List Price. Used with Balances with Gold Screws.

The strength of the hairspring is indicated by a number. To illustrate;— 16s hairspring No. 4895 Sterling-Royal grade for balances No. 4879 with composition screws, can be obtained in six strengths, from 47 (weak) to 51 (strong.)

Hairsprings No. 4895 for balance No. 4879 with gold screws, Vanguard or Maximus grade, can be obtained in three strengths, from 51 to 53.

Weak springs (low numbers) are usually suited to balances with 10 Composition Screws.

Medium " " " " " " " 12 " "

Strong " (high numbers) " " " " " " 14 " "

See page XI. in this section for new and attractive assortments of  Hairsprings.

MAINSPRINGS.

Pioneer Resilient Mainsprings

===== \$1.25 PER DOZEN. =====

These Mainsprings contain less metal than the ordinary spring. The patented process employed in tempering, develops the strength and elasticity, giving them the pulling power of a much thicker spring. They are made for all sizes of movements manufactured by the Waltham Watch Company.

COVER DESIGN OF DECORATED METAL BOX FOR WALTHAM RESILIENT MAINSPRINGS.

Beginning April 1, 1911, the corporate name appearing on Pioneer Resilient boxes will be changed to "Waltham Watch Co.," and Pioneer Resilient Mainsprings, (Blue) will be stamped or etched on the outer end "W. W. Co.," in place of "A. W. W. Co."

Watchmakers are thus able to identify Genuine **WALTHAM** Resilient Mainsprings.

NOTE TABLES GIVING STANDARD DIMENSIONS OF **WALTHAM** MAINSPRINGS ON PAGE XXXIV.

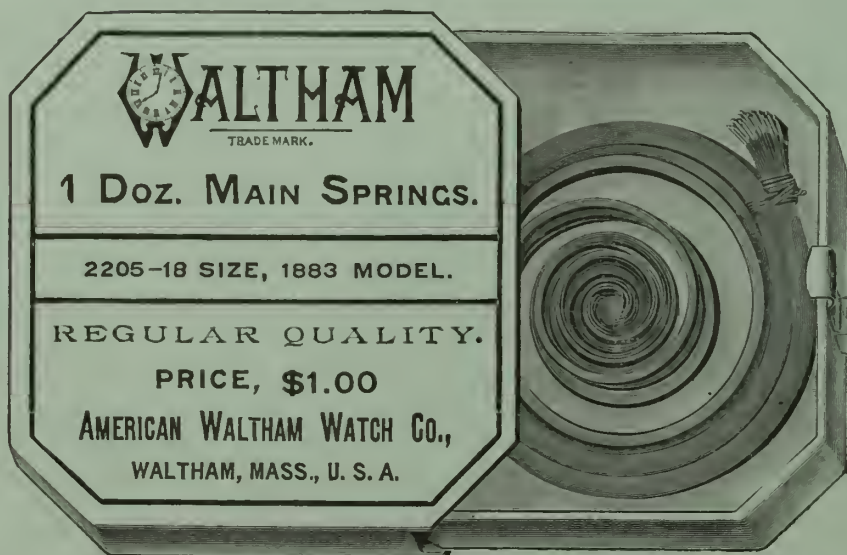

MAINSPRINGS.

REGULAR QUALITY MAINSPRINGS.

ALL SIZES OF REGULAR QUALITY MAINSPRINGS, \$1.00 PER DOZEN.

**LABEL AND INTERIOR VIEW OF WALTHAM PATENT OCTAGON BOX
FOR REGULAR QUALITY MAINSPRINGS.**

Beginning April 1, 1911, the corporate name, appearing on all regular quality mainspring packages, will be changed to "Waltham Watch Co."

NOTE TABLES GIVING STANDARD DIMENSIONS OF  MAINSPRINGS ON PAGE XXXIV.

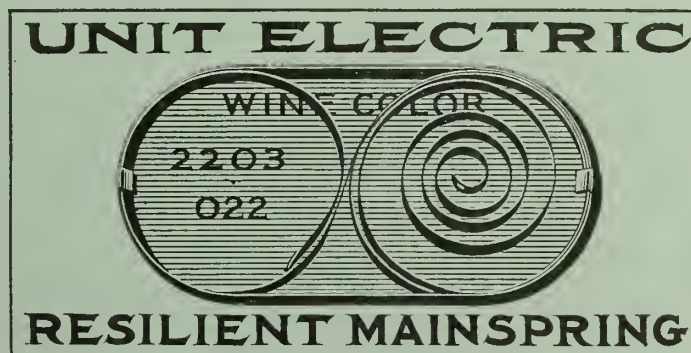

MAINSPRINGS.

THE LATEST MAINSPRING PRODUCT

from the Waltham Watch Company is the

Unit Electric (Wine Color) Resilient Mainspring.

FOR ALL
WALTHAM WATCHES

PRICE
\$1.50 DOZEN.

Here are some of the good things that the Unit Electric (Wine Color) Resilient
Mainsprings possess:—

Kind. They are Resilient.

Quality. The quality is the same as our already famous Pioneer Resilient Springs, which have made for themselves a name and reputation unsurpassed in the annals of the watch material business.

Color. They are Wine color, which means a bit higher temper than the blue springs with which the Trade are probably more familiar.

Unit Package. The springs are held, each one, in an aluminum shell, thoroughly protected against exposure, and the envelope plainly marked with the catalogue number and strength (the Unit feature).

Box. The decorated tin box which holds a dozen springs is the same length and width as our Resilient boxes have always been, permitting repairers to keep the new springs in cabinets they may already have.

The new Unit Electric (Wine Color) Resilient Spring is **the best spring that can be made**, and is in the most sensible and compact package ever put on the market.

MAINSPRINGS.

The following is a list of  Pioneer Resilient Mainsprings, giving catalogue numbers, and the minimum and maximum width and thickness which have been decided upon by the Waltham Watch Company as the best adapted for each spring.

The strength of a  spring, determined by the thickness, is denoted in this schedule in thousandths of a centimeter. To illustrate: If a  Mainspring No. 2205 is wanted weak, medium or strong, it should be ordered .021 cm. for weak; .022 cm. for medium; or .022 1/2 cm. for strong. The  standard length of springs is given in both centimeters and inches.

Catalogue Number.	Size.	Model.	Barrel Depth.	Width of Spring in Centimeters.	Thickness of Spring in Centimeters.	Length in Centimeters.	Length in Inches.

WALTHAM TAPER SHOULDER DETACHABLE BALANCE STAFF.

Nos. 4861, 8143, 20208.

This is an improved form of a detachable Balance Staff that is certain to appeal to the watchmaker, as it admits of easily and quickly changing a staff without bending the balance arm or throwing the balance out of shape. The bevel seating in the bulb "B" fits precisely the taper shoulder "F" on the staff, thus insuring a level balance. To drive out an old staff, use a tool as shown in figure 4; to put in a new staff, a punch as shown in figure 3, bringing the tapered shoulder on the staff to its bearing in the hub. Tools designed for these staffs can be obtained from watch tool manufacturers in sizes to fit regular staking tool sets. The blue steel hub should always be left in the balance arm when changing a staff.

PERFECT JEWELS A NECESSITY.

Only absolutely perfect jewels should be used in a watch. If there is the slightest flaw, so slight that the microscope has to be used to detect it, the wear on the pivot will develop sooner or later to the very serious detriment to the watch. Good jewelers will appreciate this.

The Waltham Watch Company examine jewels that come into this country, and select for their watches and material, only such as pass the most rigid microscopic tests. It is a known fact that jewels not perfect enough to be bought by the Waltham Watch Company and consequently rejected by them, are offered by unscrupulous material dealers to jewelers, at a lower price than that charged for genuine **WALTHAM** jewels. The difference in the price of perfect jewels over "bargain lots," is more than made up in the value of the jewels themselves, and in the better running of a watch movement in which they are placed.

PERFECT JEWELS A NECESSITY.

Only absolutely perfect jewels should be used in a watch. If there is the slightest flaw, so slight that the microscope has to be used to detect it, the wear on the pivot will develop sooner or later to the very serious detriment to the watch. Good jewelers will appreciate this.

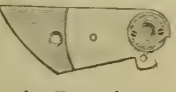

The Waltham Watch Company examine jewels that come into this country, and select for their watches and material, only such as pass the most rigid microscopic tests. It is a known fact that jewels not perfect enough to be bought by the Waltham Watch Company and consequently rejected by them, are offered by unscrupulous material dealers to jewelers, at a lower price than that charged for genuine ~~WALTHAM~~ jewels. The difference in the price of perfect jewels over "bargain lots," is more than made up in the value of the jewels themselves, and in the better running of a watch movement in which they are placed.

PERFECT JEWELS A NECESSITY.

Only absolutely perfect jewels should be used in a watch. If there is the slightest flaw, so slight that the microscope has to be used to detect it, the wear on the pivot will develop sooner or later to the very serious detriment to the watch. Good jewelers will appreciate this.

The Waltham Watch Company examine jewels that come into this country, and select for their watches and material, only such as pass the most rigid microscopic tests. It is a known fact that jewels not perfect enough to be bought by the Waltham Watch Company and consequently rejected by them, are offered by unscrupulous material dealers to jewelers, at a lower price than that charged for genuine **WALTHAM** jewels. The difference in the price of perfect jewels over "bargain lots," is more than made up in the value of the jewels themselves, and in the better running of a watch movement in which they are placed.

PERFECT JEWELS A NECESSITY.

Only absolutely perfect jewels should be used in a watch. If there is the slightest flaw, so slight that the microscope has to be used to detect it, the wear on the pivot will develop sooner or later to the very serious detriment to the watch. Good jewelers will appreciate this.

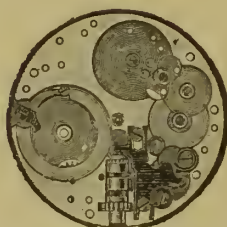

The Waltham Watch Company examine jewels that come into this country, and select for their watches and material, only such as pass the most rigid microscopic tests. It is a known fact that jewels not perfect enough to be bought by the Waltham Watch Company and consequently rejected by them, are offered by unscrupulous material dealers to jewelers, at a lower price than that charged for genuine **WALTHAM** jewels. The difference in the price of perfect jewels over "bargain lots," is more than made up in the value of the jewels themselves, and in the better running of a watch movement in which they are placed.
